

Flask assignment

CB.EN.U4CSE18502

Hridhi sethi

I have created a todo list app where in you can update , delete or create your tasks using flask

The main program is app.py

It's supported web file is index.html in templates folder

The base.html in templates folder is a file where the basic structure of the other 2 html files are present.

For styling purposes we have used main.css file present in static/css path

Few snapshots of working webpage :

The home page :

Task Master		
Task	Added	Actions
Do python	2021-03-07	Delete Update
Do the laundry	2021-03-07	Delete Update
Take dog to walk tomorrow	2021-03-07	Delete Update
<input type="text"/>	<input type="text"/>	<input type="button" value="Add Task"/>

After deleting "Do python " task

Task Master		
Task	Added	Actions
Do the laundry	2021-03-07	Delete Update
Take dog to walk tomorrow	2021-03-07	Delete Update
<input type="text"/>	<input type="text"/>	<input type="button" value="Add Task"/>

Updating "take dogs to walk tomorrow " task to "take dogs to walk "

Update Task	
<input type="text" value="Take dog to walk"/>	<input type="button" value="Update"/>

After updation :

Task Master

Task	Added	Actions
Do the laundry	2021-03-07	Delete Update
Take dog to walk	2021-03-07	Delete Update
<input type="text"/>		<input type="button" value="Add Task"/>
